## **Uniform Mitigation Verification Inspection Form**

Maintain a copy of this form and any documentation provided with the insurance policy

Inspection Date: FEBRUARY 1, 2025									
Owner Information									
Owner Name: MIDDLEBROOK PINES CONDOS CASE#: 20250201-WMIR-15			Contact Person: KEITH KIEBZAK						
Address: 5258, 5260, 5262, 5264 BRO	Home Phone:								
City: ORLANDO	Zip: 32811			32-2622					
County: ORANGE	FL		Cell Phone:						
Insurance Company:			Policy #:						
Year of Home: 1985	# of Stories: 2		Email: KLMGMTGRO	OUP@AOL.COM					
NOTE: Any documentation used in validating the compliance or existence of each construction or mitigation attribute must accompany this form. At least one photograph must accompany this form to validate each attribute marked in questions 3 though 7. The insurer may ask additional questions regarding the mitigated feature(s) verified on this form.									
<ol> <li>Building Code: Was the structure built in compliance with the Florida Building Code (FBC 2001 or later) OR for homes located in the HVHZ (Miami-Dade or Broward counties), South Florida Building Code (SFBC-94)?         <ul> <li>A. Built in compliance with the FBC: Year Built For homes built in 2002/2003 provide a permit application with a date after 3/1/2002: Building Permit Application Date (MM/DD/YYYY)//</li> <li>B. For the HVHZ Only: Built in compliance with the SFBC-94: Year Built For homes built in 1994, 1995, and 1996 provide a permit application with a date after 9/1/1994: Building Permit Application Date (MM/DD/YYYY)////</li></ul></li></ol>									
<ul> <li>✓ C. Unknown or does not meet the requirements of Answer "A" or "B"</li> <li>2. Roof Covering: Select all roof covering types in use. Provide the permit application date OR FBC/MDC Product Approval number OR Year of Original Installation/Replacement OR indicate that no information was available to verify compliance for each roof covering identified.</li> </ul>									
Permi 2.1 Roof Covering Type:	t Application Date	FBC or MDC Product Approval #	Year of Original Installation or Replacement	No Information Provided for Compliance					
1. Asphalt/Fiberglass Shingle	/								
2. Concrete/Clay Tile									
3. Metal/	/								
4. Built Up									
5. Membrane									
	<u></u>			Ħ					
<ul> <li>A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later.</li> <li>B. All roof coverings have a Miami-Dade Product Approval listing current at time of installation OR (for the HVHZ only) a roofing permit application after 9/1/1994 and before 3/1/2002 OR the roof is original and built in 1997 or later.</li> <li>C. One or more roof coverings do not meet the requirements of Answer "A" or "B".</li> </ul>									
D. No roof coverings meet the requ	•		, .						
<ul> <li>3. Roof Deck Attachment: What is the weakest form of roof deck attachment?</li> <li>A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below.</li> <li>B. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance than 8d nails spaced</li> </ul>									
a maximum of 12 inches in the field  C. Plywood/OSB roof sheathing w 24"inches o.c.) by 8d common nail decking with a minimum of 2 nails  Inspectors Initials DKS Property Addre	ith a minimum thickness is spaced a maximum of per board (or 1 nail per	s of 7/16"inch attached 6" inches in the field r board if each board is	I to the roof truss/rafter (s OR- Dimensional lumb s equal to or less than 6 in	er/Tongue & Groove					

<sup>\*</sup>This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

D. Reinforced Concrete Roof Deck.   E. Other:     F. Unknown or unidentified.   G. No attic access.			Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at least 182 psf.
F. Unknown or unidentified.   G. No attic access.   Roof to Wall Attachment: What is the WEAKENT roof to wall connection? (Do not include attachment of hip/valley jacks within 5 feet of the inside or outside corner of the roof in determination of WEAKEST type)   A. Toe Nails   Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or   Metal connectors that do not meet the minimal conditions or requirements of B, C, or D   Minimal conditions to qualify for categories B. C. or D. All visible metal connectors are:   Secured to truss/rafter with a minimum of three (3) nails, and   Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ¼" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.   B. Clips   Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.   C. Single Wraps   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.   D. Double Wraps   Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.     C. Single Wraps   Metal Connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.     D. Double Wraps   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, an		<b>✓</b>	•
G. No attic access			E. Other:
4. Roof to Wall Attachment: What is the WEAKEST roof to wall connection? (Do not include attachment of hip/valley jacks within 5 feet of the inside or outside corner of the roof in determination of WEAKEST type)  A. Toe Nails    Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or   Metal connectors that do not meet the minimal conditions or requirements of B, C, or D   Minimal conditions to qualify for categories B, C, or D, All visible metal connectors are:   Secured to truss/rafter with a minimum of three (3) nails, and   Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½ gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.   B. Clips			F. Unknown or unidentified.
Sector of the inside or outside corner of the roof in determination of WEAKEST type)   A. Toe Nails   Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or   Metal connectors that do not meet the minimal conditions or requirements of B, C, or D   Minimal conditions to qualify for categories B, C, or D, All visible metal connectors are:   Secured to truss/rafter with a minimum of three (3) nails, and   Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.   B. Clips   Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but it is secured with a minimum of 3 nails.   C. Single Wraps   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.   D. Double Wraps   Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of 1 nail on the opposing side, or   Metal connectors onesiting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of 1 nail on the opposing side, or   Metal connectors onesiting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is s			G. No attic access.
Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or Metal connectors that do not meet the minimal conditions or requirements of B, C, or D    Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are:	4.		eet of the inside or outside corner of the roof in determination of WEAKEST type)
the top plate of the wall, or   Minimal conditions to qualify for categories B. C. or D. All visible metal connectors are:   Secured to truss/rafter with a minimum of three (3) nails, and   Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.    B. Clips		Ш	
Minimal conditions to qualify for categories B. C. or D. All visible metal connectors are:			
Secured to truss/rafter with a minimum of three (3) nails, and   Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.    B. Clips			Metal connectors that do not meet the minimal conditions or requirements of B, C, or D
Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.  B. Clips  Metal connectors that do not wrap over the top of the truss/rafter, or  Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured with a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.  E. Structural  Anchor bolts structurally connected or reinforced concrete roof.  F. Other:  G. Unknown or unidentified  H. No attic access  S. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).  A. Hip Roof  Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip features:  Feet; Total roof system perimeter:  feet  Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope		Miı	nimal conditions to qualify for categories B, C, or D. All visible metal connectors are:
the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.  B. Clips  Metal connectors that do not wrap over the top of the truss/rafter, or  Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.  E. Structural  Anchor bolts structurally connected or reinforced concrete roof.  F. Other:  G. Unknown or unidentified  H. No attic access  5. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).  A. Hip Roof  Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip features:  feet; Total roof system perimeter:  feet  Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12 Roof area has nor slope of less than 2:12 sq f			Secured to truss/rafter with a minimum of three (3) nails, and
Metal connectors that do not wrap over the top of the truss/rafter, or   Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.    C. Single Wraps   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.    D. Double Wraps   Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side.    E. Structural			the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe
Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.    C. Single Wraps			B. Clips
Desition requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.  E. Structural  Anchor bolts structurally connected or reinforced concrete roof.  F. Other:  G. Unknown or unidentified  H. No attic access  S. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).  A. Hip Roof  Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip features:  feet; Total roof system perimeter:  feet  Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12. Roof area with slope less than 2:12 ga ft; Total roof area as a roof slope of less than 2:12. Roof area with slope less than 2:12 ga ft; Total roof area as a roof slope of less than 2:12 sa ft; Total roof area as a roof slope of less than 2:12 sa ft; Total roof area as a roof slope of less than 2:12 sa ft; Total roof area as a roof slope of less than 2:12 sa ft; Total roof area as a supplemental means to protect the dwelling from water intrusion in the event of roof covering loss.  Secondary Water Resistance (S			Metal connectors that do not wrap over the top of the truss/rafter, or
Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps    Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or    Metal connectors consisting of a single strap that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter, is secured with a minimum of 1 nail on the opposing side, or    Metal connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter and is secured with a minimum of 1 nail on the opposing side.    Metal connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter and is secured with a minimum of 1 nail on the opposing side.    Metal connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the minimum of 1 nail on the opposing side, or embedded in the bond beam, or			
minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.  E. Structural Anchor bolts structurally connected or reinforced concrete roof.  F. Other:  G. Unknown or unidentified  H. No attic access  5. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).  A. Hip Roof  Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip features:  feet; Total roof system perimeter:  feet  Any roof that does not qualify as either (A) or (B) above.  G. Other Roof  Any roof that does not qualify as either (A) or (B) above.  6. Secondary Water Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR)  A. SWR (also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the sheathing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the dwelling from water intrusion in the event of roof covering loss.  C. Unknown or undetermined.			· ·
D. Double Wraps    Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.    ✓ E. Structural			
Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.  ✓ E. Structural   Anchor bolts structurally connected or reinforced concrete roof.  F. Other:   G. Unknown or unidentified   H. No attic access  5.   Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification). 7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable. Non-Glazed Opening Protection Level Chart **Glazed Openings** Openings Place an "X" in each row to identify all forms of protection in use for each Windows opening type. Check only one answer below (A thru X), based on the weakest Glass **Fntrv** Garage Garage or Entry Skylights form of protection (lowest row) for any of the Glazed openings and indicate **Doors Block Doors Doors** Doors the weakest form of protection (lowest row) for Non-Glazed openings. N/A Not Applicable- there are no openings of this type on the structure Α Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights) Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights) c Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007 Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E D 330, ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance Opening Protection products that appear to be A or B but are not verified N Other protective coverings that cannot be identified as A, B, or C X No Windborne Debris Protection A. Exterior Openings Cyclic Pressure and 9-lb Large Missile (4.5 lb for skylights only) All Glazed openings are protected at a minimum, with impact resistant coverings or products listed as wind borne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level A in the table above). Miami-Dade County PA 201, 202, and 203 Florida Building Code Testing Application Standard (TAS) 201, 202, and 203 American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996 Southern Standards Technical Document (SSTD) 12 For Skylights Only: ASTM E 1886 and ASTM E 1996 For Garage Doors Only: ANSI/DASMA 115 A.1 All Non-Glazed openings classified as A in the table above, or no Non-Glazed openings exist A.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level B, C, N, or X in the table above A.3 One or More Non-Glazed Openings is classified as Level B, C, N, or X in the table above B. Exterior Opening Protection- Cyclic Pressure and 4 to 8-lb Large Missile (2-4.5 lb for skylights only) All Glazed openings are protected, at a minimum, with impact resistant coverings or products listed as windborne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level B in the table above): ASTM E 1886 and ASTM E 1996 (Large Missile – 4.5 lb.) SSTD 12 (Large Missile – 4 lb. to 8 lb.) For Skylights Only: ASTM E 1886 and ASTM E 1996 (Large Missile - 2 to 4.5 lb.) B.1 All Non-Glazed openings classified as A or B in the table above, or no Non-Glazed openings exist B.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level C, N, or X in the table above B.3 One or More Non-Glazed openings is classified as Level C, N, or X in the table above Exterior Opening Protection- Wood Structural Panels meeting FBC 2007 All Glazed openings are covered with plywood/OSB meeting the requirements of Table 1609.1.2 of the FBC 2007 (Level C in the table above). C.1 All Non-Glazed openings classified as A, B, or C in the table above, or no Non-Glazed openings exist C.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level N or X in the table above C.3 One or More Non-Glazed openings is classified as Level N or X in the table above **Inspectors Initials** DKS **Property Address** 5258, 5260, 5262, 5264 BROOK CT - BLDG 15 32811 **ORLANDO** FL
